

Radiation Oncology Research Retreat
Saturday May 4, 2024, 7:30 a.m.-12:00 p.m.
Auditorium F, DHMC (WebEx optional)

Applied Medical Physics

Benchmarking Radiomic Features using Simulated Liver Lesions – Shrey S. Sukhadia, Abdibaset A. Bare & Marthony L. Robins

Cherenkov Imaged Bio-morphological Features Verify Patient Positioning with Deformable Tissue Translocation in Breast Radiotherapy – Yao Chen

UHDR Beamline Tools for FLASH-RT Research – Austin Sloop

Break (5 minutes)

Health Services & Policy Research

Funded Radiation Oncology Visiting Medical Student Electives: A Cross-Sectional Analysis – Alexys Gayne, BS & Colin McNamara, AB, FNP

Disparities in access to multidisciplinary cancer consultations and treatment for early-stage NSCLC patients: A SEER-Medicare analysis. – Erika Moen MS, PhD

Break (5 minutes)

Clinical and Translational Research

Leveraging transcriptomics in clinical oncology: Towards genomic radiotherapy dose-adjustment – Drew T. Bergman, BA

How AI and interpretable mathematical modelling will finally enable the promise of precision medicine - Simone Korsgaard Jensen

Machine Learning based Delivery accuracy predicting in Pencil Beam Scanning Proton Therapy – Ilakiya Raghavendiran

Revisiting a Comparative Analysis of Persistent Homology and Classic Radiomic Features/Exploring Radiomic Integration in Clinical Predictive Modeling for HCC – Jalen Crump

Physics team

➤ Yong Chen PhD

➤ Mark Newpover PhD

➤ Raghav Boopathy PhD

IT Team

➤ Shawn West

➤ Rajaram

➤ Jerry Jaboin MD PhD

Thank you everyone and Very special and sincere Thanks to Dr. Thomas and the Dartmouth team !!!

Machine Learning based Delivery accuracy predicting in Pencil Beam Scanning Proton Therapy

Ilakiya R & Kabilan S

Supervisor / Mentor:

Dr. Yong Chen, PhD DABR

Associate Professor,

Chief of Physics

Stephenson Cancer Center,

University of Oklahoma Health Science Center

Revisiting a Comparative Analysis of Persistent Homology and Classic Radiomic Features/Exploring Radiomic Integration in Clinical Predictive Modeling for HCC

JALEN CRUMP

CLEVELAND CLINIC, LERNER RESEARCH INSTITUTE, CLEVELAND, OH

LM DEPARTMENT OF TRANSLATIONAL HEMATOLOGY AND ONCOLOGY RESEARCH

Acknowledgements

❖ I first want to thank Dr. Andrew Dhawan M.D., Ph.D., Dr. Jacob Scott, M.D., D.Phil, Dr. Arda Dumaz, Ph.D and the rest of the computational analysis team including Eashwar and Rowan for their continued assistance with this project

❖ I also want to thank Dr. Michael Bergen, M.D. for his input through the project.

❖ Lung project funded by U54 NIH Diversity supplement grant to an R01.

PHOM GLEANS MORE INFORMATION THAN TRADITIONAL RADIOMICS

❖ Is PHOM distinct from traditional radiomics?

Jay Crump

Unverified

Radiation Oncology Research Retreat 2024

Disparities in access to multidisciplinary cancer consultations and treatment for early-stage NSCLC patients: A SEER-Medicare analysis

Erika Moen, MS, PhD
Assistant Professor
Department of Biomedical Data Science
The Dartmouth Institute for Health Policy and Clinical Practice
Cancer Population Sciences Program
Areas of expertise: health services research, cancer, network analysis, biostatistics

Leveraging transcriptomics in clinical oncology: Towards genomic radiotherapy dose-adjustment

Drew T. Bergman^{1,2}, BA, Parth S. Shah^{3,4}, MD

¹Geisel School of Medicine at Dartmouth
Dartmouth-Hitchcock Medical Center
²Department of Radiation Oncology & Applied Sciences
³Department of Pathology & Laboratory Medicine
⁴Department of Medicine

Dartmouth Health | Dartmouth GEISEL SCHOOL OF MEDICINE | DROAS Research Retreat – 5/4/2024

Radiation Oncology Research Retreat 2024

Acknowledgements

Funding
NIH NCI R37CA263936
Improving cancer health equity by targeting physician networks
Total award amount (including indirects): \$1,522,700
to ELM

Dartmouth Presidential Scholarship
to YL

Study co-authors

Yue-Chi Liu	Rachel Schmidt	Nirav Kapadia	Joseph Phillips
CPS	ICI	DCC Research program	

Additional collaborators
James O'Malley, PhD
Gabriel Brooks, MD
Tracy Onega, PhD
Karen Schifferdecker, PhD
Andrew Schaefer, PhD
Bruno Scodari
Sarah Cornelius, MPH

Citation:
Liu Y-C, Schmidt RO, Kapadia NS, Phillips JD, Moen EL. Disparities in access to multidisciplinary cancer consultations and treatment for early-stage non-small cell lung cancer patients: A SEER-Medicare analysis. JORBP. 2024. Online ahead of print.

AI + First Principles Mathematical Modelling

$$\frac{dL}{dt} = \underbrace{\lambda L \left(1 - \frac{L}{K}\right)}_{\text{Growth}} - \underbrace{\eta L}_{\text{Necrosis}} - \underbrace{\gamma L \sum_{i=1}^n \delta(t - t_i)}_{\text{Radiotherapy}}$$

$$\frac{dN}{dt} = \eta L - \underbrace{\zeta N}_{\text{Decay}} + \gamma L \sum_{i=1}^n \delta(t - t_i)$$

Allows you to simulate future tumour growth for an individual
