

To: Norris Cotton Cancer Center Members
From: Christopher I. Amos, Ph.D. 
Date: April 27, 2017
Subject: Cancer Center Developmental Funds (Pilot Projects)
2017 First Cycle

In 2017 NCCC again will fund pilot projects that advance meritorious cancer research. The purpose of developmental funds is to support preliminary studies that demonstrate novel approaches and provide preliminary data necessary for planned grant applications.

Eligibility Criteria: At least one Principal Investigator on a project must be a current Cancer Center Member. Funded investigators (including current Pilot Project PIs) are eligible, but the application should address how the request represents novel work in light of current funding. Priority will be given to projects that clearly include key elements of the NCCC strategic plan (e.g., innovation, team science and translational research). This year, applicants also will be asked to comment whether work relates to any of the designated national priorities (i.e., NCI Provocative Questions or National Cancer Moonshot). In addition to priority score, final funding decisions will seek a set of awards that spans basic, clinical and population-based research, including efforts in prevention and health promotion, patient-centered precision medicine, and optimization of patient outcomes. Please note, NCCC now has available additional support restricted to leukemia, and applications that fulfill that restriction will be eligible for award from those additional funds. Early stage investigators may be funded from the American Cancer Society Institutional Research Grant.

Awards: In 2017, awards are available in the following two (2) categories:

Prouty Pilots: Available funding totals \$250,000.

(Individual PIs): New early stage cancer investigators (i.e. assistant professor appointment within the last 5 years) individually may apply for one-year of support, up to \$25,000 in direct costs, for a proposal that includes the commitment of an established Cancer Center Member in an unfunded role of mentor.

(Multiple PIs): Any Cancer Center Members may apply, for up to \$50,000, for collaborative translational proposals (i.e., that pursue either application of scientific discoveries to clinical practice or community interventions or underlying mechanisms behind observations from patient care or public health). Requests for clearly exploratory work are capped at \$25,000, with \$50,000 requests requiring citation of specific planned grant applications.

As noted above, currently funded investigators must propose a project that takes work in a new direction. Given the pilot intent of the awards, projects requiring more than consumable costs (e.g., PI salary support and/or equipment purchases) should cite an institutional commitment to pursuing the results of the work proposed beyond the project award period's support for ongoing costs. Other Expense requests for purchased services outside of an NCCC Shared Resource require confirmation from the NCCC Shared Resource Director that the service needs to be purchased elsewhere.

Review criteria: Proposals will receive internal peer review, including NCCC Program leadership. Criteria include scientific merit, translational emphasis, and likelihood of pilot data necessary for a planned grant application. Applications should address feasibility of the work proposed, but preference will be given to pilot projects testing novel approaches to innovative and high-risk aims. Translational projects may bridge laboratory, clinic, and/or population-based research in either direction. Proposals are encouraged to involve co-investigators from diverse disciplines to demonstrate the translational nature of the work, as long as one co-investigator is a current NCCC Member. Interventional studies are encouraged, particularly those that engage a catchment area population. Please note that informational Letters of Intent are required (to plan reviews and not reject submissions), and confirmation will be provided regarding responsiveness to review criteria.

Applications: Proposals should use the attached forms, which begin with a one-page letter of intent and cover sheet, principal investigator biographical sketch, description of the research proposed, and budget justification. The description of the research proposed is limited to 5 pages and must address background, aims, methods, and cancer relevance.

Letters of Intent (to confirm the responsiveness of proposals to award criteria) and applications should be sent to the attention of Robert Gerlach, NCCC Research Administrator. Questions should be directed to Mr. Gerlach at 3-6187.

As in 2016, this year NCCC will have two review cycles for Pilot Project Proposals. For the first cycle, **Letters of Intent are due Monday, May 22nd. Applications must be received by Monday, June 26th, 2017. Awards are anticipated to be made by September 1.** Awards will include confirmation of the intent of recipients to participate in future reporting and presentation of work to our generous public supporters, Friends of Norris Cotton Cancer Center.

The second 2017 review cycle will require receipt of Letters of Intent by Monday, September 18th, with applications due by Monday, October 30th. These dates have been chosen to facilitate submission of revised unfunded first cycle applications as well as new proposals.
